

WILLIAMS POWER NOZZLE & TRI-ANCHOR

Power Nozzle

The specially designed conical shape of the nozzle will ensure that larger articles are pushed forward and squeezed through with a minimum of power loss. This together with a superior flexibility will virtually free you of any blockages. The power nozzles give the irrigator a greater spread, without the stress of increasing the rotor width

- Easy to install
- Reliable and efficient
- Quick release
- Cost effective
- Will fit all irrigators
- Virtually ZERO BLOCKAGE

Tri-Anchor

The Williams Tri-Anchor is custom made to provide a secure fixing point for the Spider and Spider Deluxe range of the traveling effluent irrigators.

Fully hot-dip galvanized, it's robust construction and design ensures a firm anchor in a wide variety of soil types. The 3 piece construction allows the Tri-Anchor to be easily transported on a farm bike or by hand.
