

GB MAGNUM

Travelling Raingun

WILLIAMS

NZ Patent #603925

Our reputation is spreading

The Williams GB Magnum travelling raingun irrigator is the first of its kind. The patented design combines the performance of a static raingun with the reliability of our Greenback travelling irrigator to create an irrigator that we believe surpasses all competing forms of effluent irrigation equipment. With a wetted width more than twice as wide as a traditional travelling irrigator, offering application rates and depths competitive with sprinkler systems, the Magnum is the obvious answer to your MooPoo problem.

FEATURES

Proven simple design	Unique gland sealing system using double lipped neoprene seals
Application depths of 3mm - 25mm and rates below 10mm per hour	5mm galvanised, stainless steel or nylon wire rope with lengths of 250, 300 and 400m
Wetted widths from 45m - 90m	NZ Designed and Manufactured
5 travel speeds	Neat and tidy, easy to use
Sime Synkro effluent raingun	Built to last
Designed to suit flowrates from 5ltr/sec - 14ltr/sec (18 m ³ - 45 m ³)	Cost effective

Williams' GB Magnum

SPECIFICATIONS

Travel Distance	250 - 400m
Wetting Width	45 - 90m
Boom Width	8.5m
Minimum Pressure	200 kpa
Maximum Pressure	600 kpa
Max. Draghose	90 od
Minimum Flow	17, 640 m3/hr
Maximum Flow	51, 360 m3/hr

For the detailed performance chart visit the website.

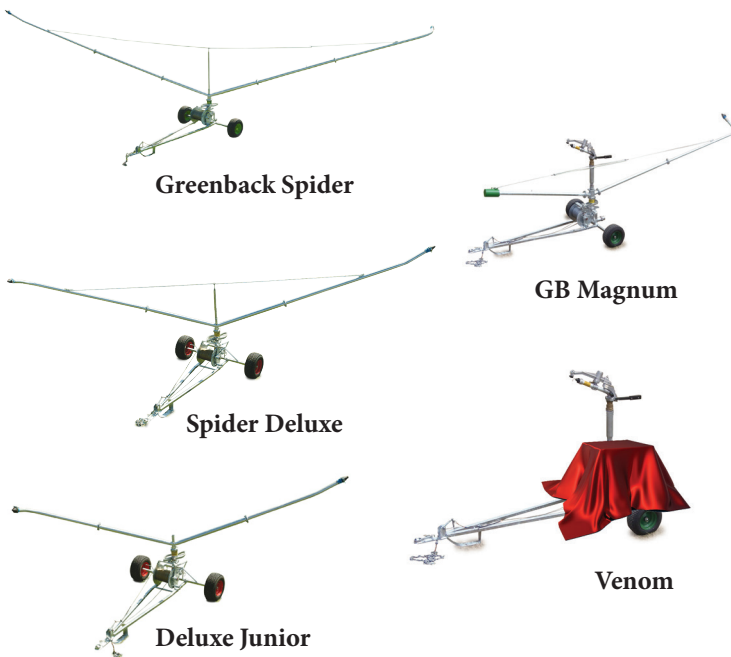

“The lower application depths offered by the Williams GB Magnum, has enabled us to significantly increase the number of irrigation days possible throughout the year by reducing the trigger soil moisture deficit required for an irrigation event. The single factor reduced our required storage capacity by 1,100m³ saving us approximately \$42,000 in pond construction costs.”

W. Reynolds, Gordonton
