

Effluent Products

## Effluent Raingun

Designed for effluent and water, Reid & Harrison Services rainguns are particularly ideal for high risk soils where, for example, contour is sloping greater than 7°, there is impeded drainage, or where soil moisture content is relatively high. Even on low risk soils, the rainguns provide gentle application for enhanced soil and plant absorption.

**Reid & Harrison Services rainguns offer a true low intensity solution for difficult contours and high risk soils.**

They are manufactured to the highest standard using quality components for durability and long service life. Each systems is tailored to suit your needs.

### Features

- Utilises Sime™ or Ranger raingun head having low wear and reduced blockage
- Operates in a full circle or part circle with slow return, giving uniform distribution in the coverage area
- Hot dip galvanised skid frame to suit 75-100m drag hoses (2 ½-4" bore)
- Low intensity application rate 5-10 mm/hr
- Flow range 6,600-114,000 l/hr
- Pressure range 1.5-6.9 bar (22-100 psi)
- Wetted diameter 60 to 130m
